1054	260	1650	800	38
1252	300	1600	800	52
1465	360	1850	800	72

Higher flow rates than those recommended may result in lower water quality.
For pH of less than 6, reduce flow of NF series by 30-50% to achieve adequate pH adjustment. Do not use on waters suffering bacterial contamination without adequate disinfection prior to the unit.
(Use our Ozone or UV systems for disinfection)

ORDERING INFORMATION:

As each system is tailored to suit the particular application, unit sizes will be confirmed upon receiving water quality data and required duties.
